

## Example appspec.yml - EC2 Based Deployment

```
version: 0.0
os: linux
files:
  - source: Config/config.txt
    destination: /webapps/Config
  - source: Source
    destination: /webapps/myApp
```

```
hooks:
  BeforeInstall:
    - location: Scripts/UnzipResourceBundle.sh
    - location: Scripts/UnzipDataBundle.sh
  AfterInstall:
    - location: Scripts/RunResourceTests.sh
      timeout: 180
  ApplicationStart:
    - location: Scripts/RunFunctionalTests.sh
      timeout: 3600
  ValidateService:
    - location: Scripts/MonitorService.sh
      timeout: 3600
      runas: codedeployuser
```

**Lifecycle event hooks are run in a specific order known as the Run Order.**

### Phase 1

De-register instances from a Load Balancer.

### Phase 3

Re-register instances with the Load Balancer.

### Phase 2

The real nuts & bolts of the application deployment.

# Run Order For An In-Place Deployment

## Before

Tasks you want to run on instances **before** they are de-registered from a Load Balancer

## After

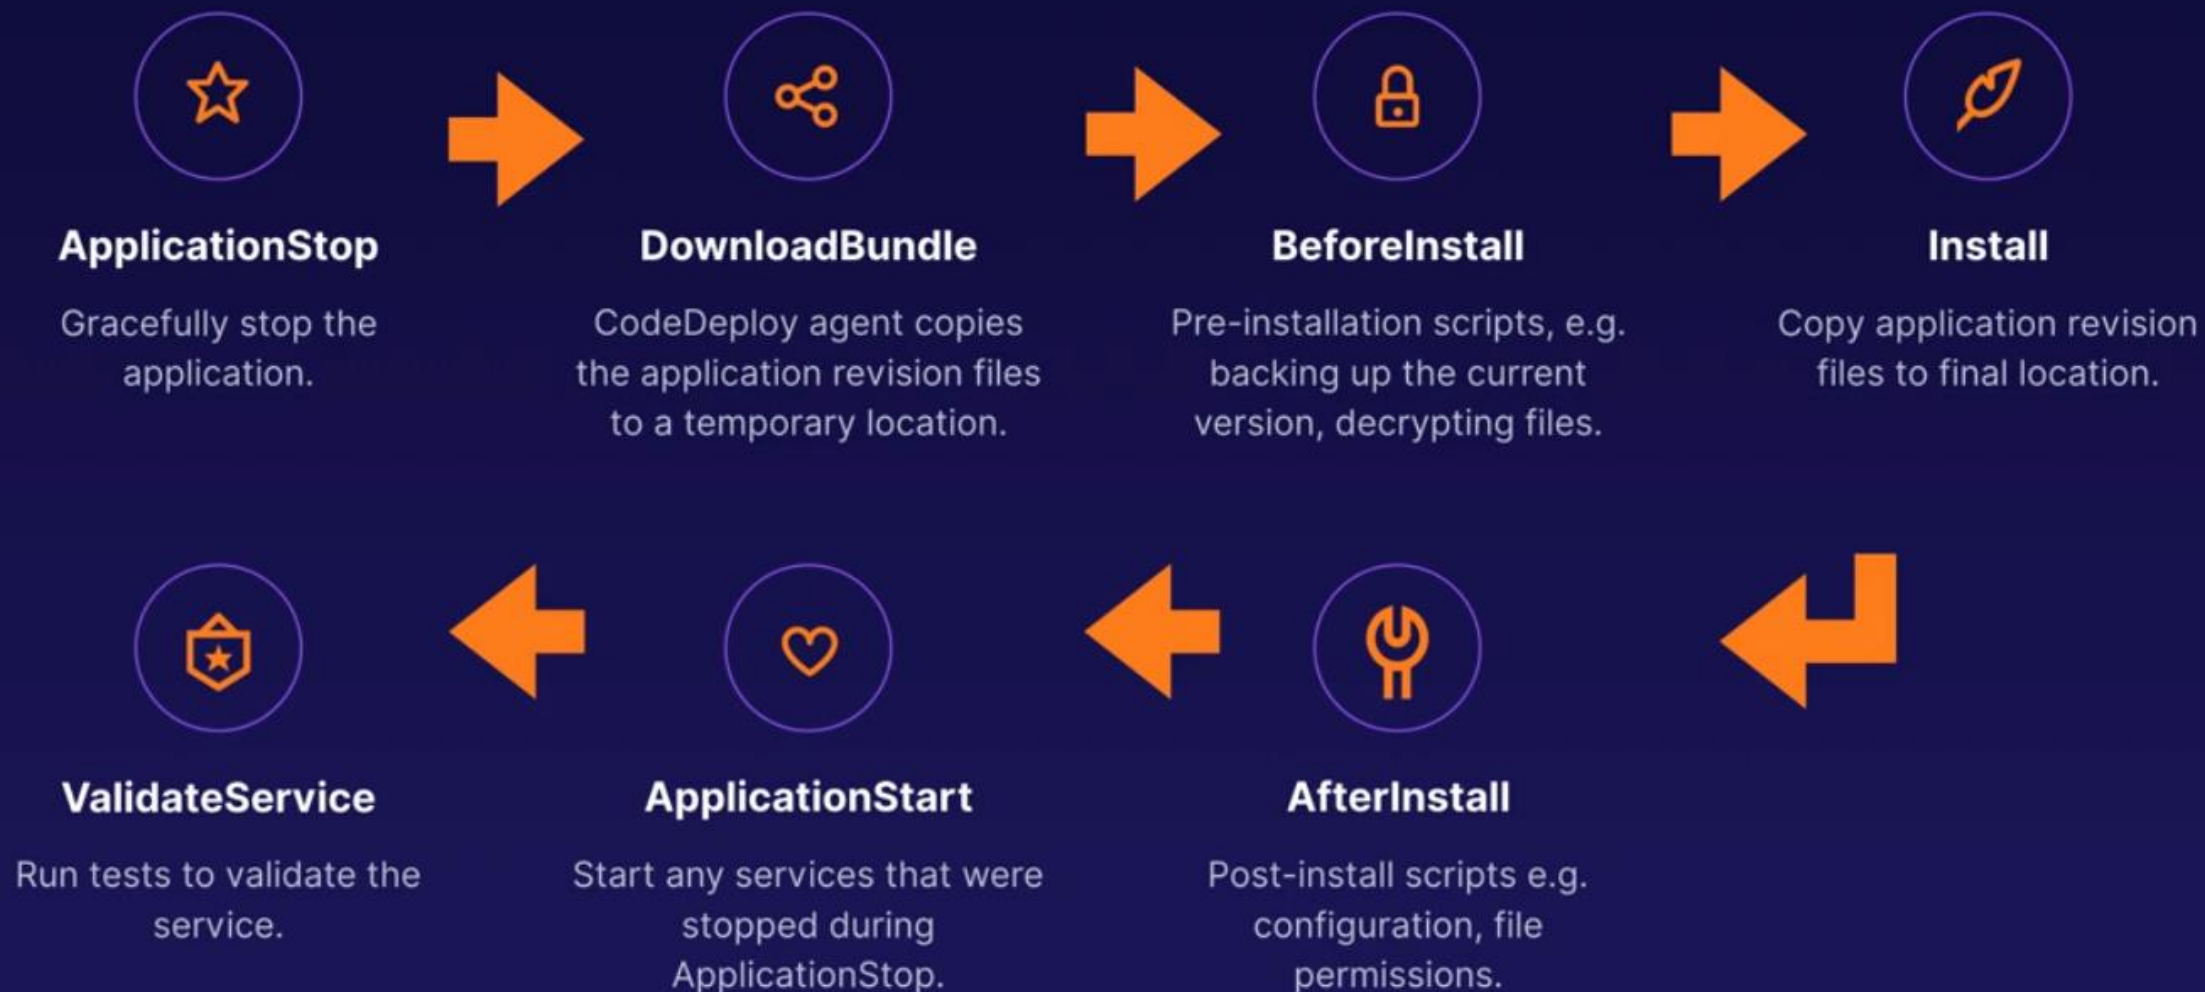

Tasks you want to run on instances **after** they are de-registered from a Load Balancer

## Block

De-register instances from a Load Balancer

# Run Order For An In-Place Deployment

# Run Order For An In-Place Deployment

## Before

Tasks you want to run on instances **before** they are registered with the Load Balancer.

## After

Tasks you want to run on instances **after** they are registered with a Load Balancer.

## Allow

Register instances with a load balancer.

# Exam Tips

## Run Order

Lifecycle event hooks are run in a specific order known as the Run Order.

## In-Place Deployment

Broadly 3 phases:  
de-registering, installation, re-registering with a Load Balancer.

## Logical Flow

For the exam you'll need to understand the logical flow.
